Compiler Design project4

405420052 資工三 陳奕瑋

In this project , I finished all the requirement specification.

Its main features are as follows.

Integer and floating –point data type:int,float

If you mixed different data type together , you'll get an error.

Statements for arithmetic computation.

Support for the priority of the parentheses , and with fully

arithmetic computation.

Comparison expression.

Support for the logical operator , such as > , >= , < , <= , != ,

and == , right and left operand can both be an Identifier ,

Number , etc.

If-then-else program construct

You can use "if" alone.

Printf() function with one/two parameters.(support types:%d,%f)

Support for more than two parameters.
